DATA ANALYST HIGHLIGHTS

Data Analyst working across Australian energy regulatory data, building **SQL** and **Python** pipelines and **Power BI** reporting over **AER RIN**, revenue determination and network performance data for regulatory, investor and executive audiences.

AEMO Certified NEM Foundations. Full Australian work rights.

- Delivered an end-to-end **Databricks** ingestion pipeline processing **~90 AER RIN report-years** across **17 networks (12 DNSPs and 5 TNSPs)** into **PostgreSQL** on Amazon RDS, replacing manual handling of 90+ Excel workbooks and cutting data preparation from **~4 hours per query to under 10 minutes**.
- Modelled allowed-vs-actual **capex and opex variance** for all **18 regulated NSPs** across **2006 to 2024** in real dollars, attaching **AER final-determination building blocks** (MAR, return on capital, depreciation, opex allowance) to each network's current regulatory period, which put the 2024 fleet at **capex 6.5%** and **opex 1.6%** above approved targets and quantified the **DMO network charge at \$853.34 a year, up 17.7%**.
- Caught **12+ defect patterns** before release, including a **\$3.6B** fan-trap join inflation and a **1000x** unit-scaling error, and wrote a verification script recomputing **35 published figures** from **PostgreSQL** against what the dashboard renders (**35/35 match**), giving **0 critical defects** across every investor and client pack.

TECHNICAL SKILLS / SKILLS: SQL | Power BI | DAX | Python | dbt | PostgreSQL | Databricks | Star Schema | Data Quality | Data Reconciliation | AER RIN | Revenue Determinations | Regulatory Reporting | Advanced Excel

EXPERIENCE

Outpost Ventures

MELBOURNE, VIC

Business Analyst

Mar 2026 – Jun 2026 (4 months)

- Owned the company's regulatory data product end to end, from ingestion pipeline to **Power BI** dashboard, with outputs used in client demos, investor reporting and a client engagement priced at **\$75K**.
- Designed a **22-fact-table** warehouse covering all **42 source tables** across **15 AER regulatory domains** (replex, opex, augex, asset age, vegetation, metering), normalising **20+ company-name variants** into one canonical dimension so five years of trends stayed comparable.
- Implemented **data quality** controls (unit-scaling verification, cardinality checks before every join, cross-year validation) and reconciled every fact table to the cent against source, including a **\$46.87B** cost-mix total.
- Built **Power BI** dashboards across investor, company and regulatory views, comparing capex, opex, **RAB**, asset age and reliability across all **17 networks** from one reporting layer and removing ~5 separate Excel files per analysis request.
- Integrated **AEMO NEM** market data alongside the AER submissions and deployed a retrieval-augmented consultation tracker over active **AER/AEMC** proceedings, letting the team tie live expenditure data to specific regulatory review questions.

Amazon

MELBOURNE, VIC

Operations Associate & Safety Analyst

Jun 2023 – Present (3 yrs 4 months)

- Lifted accuracy on reported operational and safety metrics from **~85% to 98.5%** by reviewing and correcting across four internal systems, cutting downstream rework by **~15%** so management decisions ran on reliable numbers.
- Built **Excel**-based shift reporting consolidating **WMS, ICQA, Cortex** and **AUSTIN** data across a ~40-associate shift, cutting reporting cycle time by **~20%** in a safety-critical, SLA-driven environment with **zero safety incidents** across 3+ years.

NielsenIQ

VADODARA, INDIA

Data Analyst

Sep 2021 – Dec 2022 (1 yr 4 months)

- Rebuilt recurring reporting workflows using **SQL** extraction and **Excel** automation across a **20+ account** enterprise portfolio, lifting on-time delivery to **98%+** with **95%+ accuracy** across **70+ reporting cycles**, the delivery discipline a regulatory reporting calendar demands.
- Built **SQL** extraction, cleaning and validation workflows replacing manual data pulls across the portfolio, cutting manual fixes by **30%** and freeing **8+ hours** of analyst time a week.
- Standardised **KPI definitions** across accounts that each used their own, cutting rework when switching accounts by **40%** and making every output directly comparable.

PROJECTS

Grid Cost Transparency

Aug 2026

Python | PostgreSQL | dbt | Power BI (PBIP/TMDL/PBIR/DAX) | SQL | Git · [Live dashboard](#) · [GitHub](#)

- Built a public **AER** regulatory analytics platform ingesting **233K+ rows** across **25 AER Category Analysis RIN tables** plus determination, **DMO/VDO** and **AEMO** sources for all **18 NSPs**, delivered as a **5-page Power BI** report with **75 DAX measures** on a 6-mart star schema, version-controlled as **TMDL** text so every change is reviewable as a diff.
- Benchmarked cost against reliability across the fleet, surfacing a **13.7x** spread in annual outage minutes (**CitiPower 21** vs **Ergon 287**) and demonstrating that customer density, not spend, explains it, so a cost-per-customer league table without a density adjustment measures geography rather than efficiency.
- Authored a full **BRD** ahead of the build (**5 personas**, **8 functional** and **7 non-functional requirements**, acceptance criteria, a **5-test UAT plan** and a traceability matrix), then executed that plan against the live model and closed **3 requirement gaps** the build had missed.
- Engineered a **22-model dbt** layer with **80 automated tests** running green, applied ABS CPI deflation so multi-year expenditure is never silently compared across dollar bases, and made every source-disclosure gap visible on the page rather than interpolated.

CERTIFICATIONS

AEMO Certified NEM Foundations

Jul 2026

Australian Energy Market Operator (AEMO)

EDUCATION

Swinburne University of Technology

MELBOURNE, VIC

Master of Data Science

Feb 2023 – Dec 2024

Capstone: Polimap geo-analytics platform, client engagement under NDA – High Distinction

The Maharaja Sayajirao University of Baroda

VADODARA, INDIA

Bachelor of Science in Statistics

2018 – 2021

Probability, inference, regression, time series, survey methods
